DETAILED ACTION***Election/Restrictions***

φ 1. Claim ²²~~21~~ is generic to the following disclosed patentably distinct species: each species is directed to any 2 or any 3 or any 4, etc of the listed SEQ ID NOS 1-10. Applicant is required to elect a specific combination of 2 or more of SEQ ID NOS 1-10. The species are independent or distinct because they are drawn to structurally distinct sets of nucleic acid molecules. Applicant is required under 35 U.S.C. 121 to elect a single disclosed species, even though this requirement is traversed. Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which depend from or otherwise require all the limitations of an allowable generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

2. It is noted that the instant application is a divisional application of 09/485,434, in which kits comprising a nucleic acid consisting of any one of SEQ ID NOS 1-10 are patented. The instant claims, however, are not limited to the specific SEQ ID NOS, but are drawn to nucleic acids comprising fragments of any 2 of the sequences listed. Accordingly, the search burden for searching each distinct permutation of possible combinations of nucleic acid molecules, wherein each molecule reads on a broader sequence than was allowed, presents a serious search burden.

Art Unit: 1634

Accordingly, due to the search burden presented by the newly added claims (and because the sets of nucleic acid molecules are structurally distinct), the species election above, is set forth.

3. It is noted that should a specific combination of sequences be found allowable, claims to additional sets of nucleic acids which comprise the allowable combination can be added and the species election with regard to each set comprising the allowable combination will be withdrawn.

4. Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

Should applicant traverse on the ground that the inventions or species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the inventions or species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C.103(a) of the other invention.

5. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
